

Northeastern REMC

Procedures for Interconnecting an Inverter-Based Small Generating Facility No Larger than 10 kW

- 1.0 The member completes the Application for Member-Owned Generation ("Application") and submits it to Northeastern REMC.*
- 2.0 Northeastern REMC will acknowledge to the Customer receipt of the Application within ten Business Days of receipt.*
- 3.0 Northeastern will evaluate the Application for completeness and will notify the member within ten Business Days of receipt that the Application is or is not complete and, if not, advises what material is missing.*
- 4.0 Northeastern will verify that the Generating Facility can be interconnected safely and reliably. Northeastern will complete this process within 15 Business Days. Unless Northeastern determines that the Generating Facility cannot be interconnected safely and reliably, Northeastern will approve the Application and return it to the member.*
- 5.0 After installation, the member returns the Agreement for Interconnection to Northeastern. Prior to parallel operation, Northeastern may inspect the Generating Facility for compliance with standards which may include a witness test, and may schedule appropriate metering replacement, if necessary.*
- 6.0 Northeastern will notify the member in writing that interconnection of the Generating Facility is authorized. If the witness test is not satisfactory, Northeastern has the right to disconnect the Generating Facility. The member has no right to operate in parallel until a witness test has been performed, or has been previously waived. Northeastern is obligated to complete this witness test within ten Business Days of the receipt of the Agreement for Interconnection. If Northeastern does not inspect within ten Business Days or by mutual agreement of the Parties, the witness test is deemed waived.*
